

PanelCrafters™: Superior Plates & Panels

For a complete selection refer to page 198 in Liberty's product catalog.

PanelCrafters Plates and Panels set the standard against which all other plates and panels are judged.

PanelCrafters builds the best plates in the world.

- Aircraft grade Aluminum - We prefer to work with aluminum because other materials are too thin for engraving and bend. Aluminum retains its beautiful shape and finish for the life of the plate.
- Paint filled engraving can't be scraped off the plate, so you'll always know what goes where!
- Quality connectors
- In addition to the custom plates and panels, PanelCrafters also has hundreds of standard plates that are predesigned. This simplifies our process so you can save a little money on these plates vs. a custom plate.
- Many of these plates are in inventory, ready to ship. Just look for the "Ships same Day" balloon in the catalog.
- Process to guarantee the custom plate you want is the plate you get when you need it.
 - From the simplicity of WebBlox
 - > Any internet enabled computer
 - > No special software required
 - > Immediate design, proof and quote
 - Sophistication of CadBlox/CadQuote
 - > Works with AutoCad
 - > Create submittals for Consultant driven projects
 - > Immediate design, proof and quote
 - > What you design is exactly what you get
 - Beats Napkin-Cad every time!
- Variety of finishes
 - Anodized (clear or black)
 - Powder Coat (any color)
- Variety of Materials
 - Aluminum - Steel - Stainless Steel
 - Plastic- Nylon
- Variety of labels
 - Engraved (paint filled to compliment paint finish)
 - Screen printed (Excellent for multiple copies of same plate, choice of colors)
 - Digitally printed (Full color, durable plastic finish)
- Not laser engraved (color is muted, only works on stainless steel)

- Custom Logos
 - Digital Printed
 - Screen Printed
- Choice of Connectors. You decide how you want to terminate the cables, we've got the connector to match. Example VGA:
 - The ActiveLinX products are the finest interfaces on the market. They are designed with the user in mind. Bandwidth over 600 Mhz. Controls out of the reach of the end-user. Phoenix connectors. Easy to install. Reliable to operate.
 - The Ultimate product is the A2 - Monitor loop through, Gain and EQ adjustments up to 200' with more than 300MHz bandwidth. Phoenix connectors on the balanced audio and power make it easy to install. The monitor output is buffered so your customer doesn't have to adjust confusing termination switches. The Gain and EQ are set with DIP switches so your installer doesn't need to guess.
 - The A3 is similar - we've just removed the monitor output so it's perfect for laptops.
 - Our A4 is designed for classrooms with desktop computers. The high-quality, value-priced Distribution amplifier offers a buffered output for the monitor and RGB output for the projector. The audio is a simple pass-through connector - perfect for the speakers in a projector or other display.
 - The P1 is designed for simple laptop to projector connections. It keeps field termination to a minimum and yet allows you to pull wire through conduit and other tight spaces.
 - We also offer the V54 fan-out
 - V42 Screw terminal
 - Simple solder
 - V5 pass through connectors.
- PanelCrafters prefers Neutrik XLR connectors on all our plates. They are available in both solder and crimp styles for easy on-site termination.
- We also have Neutrik Speakon, Ethercon, Opticon and PowerCon connectors for robust field termination.
- We also have a variety of ways to extend digital signals, including fiber, HDMI, DVI, and USB. Our DL-HDCAT-WP can be built into any single gang plate or larger to extend HDMI 1080p signals as far as 150'.

PanelCrafters™: Superior Plates & Panels

For a complete selection PanelCrafters™ products please refer to page 198 in Liberty's product catalog.

Proofing Process

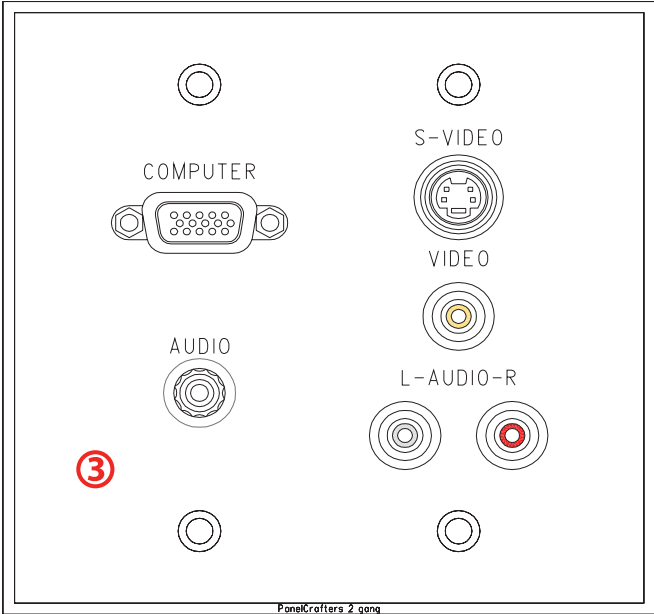

PanelCrafters™ offers the most streamlined and accurate proofing process in the industry. Proofs are consistent between our on-line quoting programs and quotes produced by PanelCrafters staff. PanelCrafters up-front proofing process makes the quote-to-order process fast and easy.

Up-front proofing ensures that we produce your panels exactly as you requested so your highest quality plates and panels are on-time – every time. Requests that include non-stock materials or require additional engineering may be quoted and returned without design proofs. When ordered, these parts will be engineered and proofs will be submitted prior to production. No ordered product can be manufactured without your signed proof.

Submit drawings to sales@panelcrafters.com to obtain quote with proof.

We guarantee a flawless product each time and every time.
 PanelCrafters™ quotes and up-front proofs provide the following features:
